EMS construction of West African communication base stations

Overview

How many EMS systems are there in Africa?

There was no evidence of EMS systems in 33 (61%) countries. A total of 98,574,731 (8.7%) of the African population were serviced by at least one EMS system in 2012. The leading causes of EMS transport were (in order of decreasing frequency): injury, obstetric, respiratory, cardiovascular, and gastrointestinal complaints.

What are EMD systems in the African context?

All of the findings and recommendations are directed at EMD systems in the African context. EMD describes a system of communication designed to reliably allow the public to access available emergency medical resources (i.e. prehospital care and transportation, which are locally defined).

Do emergency medical services exist in Africa?

Basic emergency medical technicians (EMTs) and Basic Life Support (BLS)-equipped ambulances were the most common cadre of provider and ambulance level, respectively (84% each). Conclusion: Emergency Medical Services systems exist in one-third of African countries. Injury and obstetric complaints are the leading African prehospital conditions.

Who participated in the African EMD working group?

Twenty individuals with expertise in African emergency and trauma care, EMS, and emergency communication participated, constituting the African EMD working group. In addition to the US based IAED personnel, they represented 10 countries: Botswana, Cameroon, Ethiopia, Ghana, Kenya, Malawi, South Africa, Tanzania, Uganda, and Zambia.

What causes EMS transport in Africa?

The leading causes of EMS transport were (in order of decreasing frequency): injury, obstetric, respiratory, cardiovascular, and gastrointestinal complaints.

Nineteen percent of African countries had government-financed EMS systems and 26% had a toll-free public access telephone number.

Are EMS systems context appropriate?

As EMS systems are rapidly developing across many parts of Africa, EMD systems which are context appropriate are in great need, but are mostly absent despite the wide availability of telecommunications technology. Emergency Medical Dispatch (EMD) systems are a critical component of, and point of public access into, emergency care systems.
