

SolarMax Energy Systems

EMS solution for Iran s communication base stations

Overview

What is EMS in Bess?

EMS Functionality in BESS The primary role of EMS in BESS is to provide centralized control and monitoring across the energy storage station. EMS integrates with Power Conversion Systems (PCS), Battery Management Systems (BMS), and auxiliary systems such as fire safety, liquid cooling, air conditioning, and dehumidifiers.

How does EMS work?

EMS integrates with Power Conversion Systems (PCS), Battery Management Systems (BMS), and auxiliary systems such as fire safety, liquid cooling, air conditioning, and dehumidifiers. It gathers real-time data from all subsystems, transmitting essential information to the grid dispatch center while receiving commands for optimized operation.

What is BMS & EMS?

- BMS focuses on battery data analysis, providing real-time monitoring, fault diagnostics, and data support for EMS optimization.
- Edge Servers: For data acquisition and real-time analysis using AI techniques.
- Communication Hubs: Ensuring seamless data exchange between BESS modules.

EMS solution for Iran s communication base stations

Connected EMS Solutions

CREATE IMPROVED OUTCOMES Public safety grade communications enable EMS to accelerate response and meet their goals of reducing the time for treatment to begin, resulting ...
