

SolarMax Energy Systems

El Salvador outdoor power supply market price

Overview

El Salvador's energy sector is largely focused on renewables. El Salvador is the largest producer of geothermal energy in Central America. Except for hydroelectric generation, which is almost totally owned and operated by the public company CEL (Comisión Hidroeléctrica del Río Lempa), the rest of the generation capacity is in private hands. With demand expected to grow at a rate of 3.5% per year, electricity supply and demand are expected to be in balance. El Salvador is the country with the highest production in the region. Total installed capacity is 1,100 MW.

In 1995, only 65.5% of the population in El Salvador had access to electricity. Currently, the electrification index is 83.4%. This coverage is higher than that in Guatemala (83.1%), Honduras (71.2%) and Nicaragua (71.2%).

In 2005, the average number of interruptions per subscriber was 12, while the duration of interruptions per subscriber was 16 hours. This is very close to the average for the region, which are 13 interruptions and 14 hours.

The regulatory entities for the electricity sector in El Salvador are: • The Electrical Energy Directorate (DEE - Dirección de Energía Eléctrica), created in 2001, is the administrative unit within the Ministry of Energy.

The 2007 National Energy Policy supports the diversification and increase of energy sources, mainly through renewable energy such as hydroelectricity, geothermal, solar, wind power and biofuels (as well as mineral coal and natural gas).
