

## **SolarMax Energy Systems**

# **Energy Storage Liquid Cooling Fire Fighting**

## Overview

---

Can liquid cooling technology be used to protect firefighters' suits?

In this paper, we propose a new liquid cooling strategy (NLCS) by embedding liquid cooling technology into firefighters' suits to create a composite protection system that intercepts heat before it enters the microenvironment under the suit. The performance of the NLCS was evaluated through thermal protective performance tests.

Does liquid cooling improve firefighting performance?

The new strategy effectively intercepts heat before it reaches firefighters, enhancing protective performance. The new strategy reduces energy consumption and minimizes cold stimulation. This study provides valuable references for the application of liquid cooling in firefighting scenarios.

Can liquid cooled systems stop fire propagation?

"In the event of a thermal runaway, liquid-cooled systems may not stop fire propagation, leaving the risk of escalating events unaddressed," Jack Wu says. Liquid cooling systems often rely on extensive plumbing, pumps, and heat exchangers, which add to the complexity and maintenance requirements.

Does liquid cooling prevent fire?

As a result, liquid cooling provides thermal management but not fire suppression. "In the event of a thermal runaway, liquid-cooled systems may not stop fire propagation, leaving the risk of escalating events unaddressed," Jack Wu says.

Do lithium-ion battery energy storage systems cause fires?

The report is a culmination of a two-year research project examining the characteristics of fires resulting from the overheating of lithium-ion battery energy storage systems (ESS) within residential structures.

What cooling methods are used in firefighting?

Cooling methods that can be utilized in firefighting include passive cooling (natural cooling), immersion cooling, fan array cooling, intravenous saline drip, phase change material (PCM) cooling, and liquid cooling .
