

## SolarMax Energy Systems

# Energy storage discharges when charging the battery

## Overview

---

What is the difference between charging and discharge of a battery?

Charging replenishes the energy depleted during discharge, preparing the battery for subsequent use. Discharge: In contrast, discharge occurs when the stored energy in the battery is released to power external devices or systems.

How does a battery charge work?

This process involves transferring electrons from the positive electrode (cathode) to the negative electrode (anode), creating a potential difference or voltage across the battery terminals. Charging replenishes the energy depleted during discharge, preparing the battery for subsequent use.

What happens when a battery is recharged?

Assuming the battery has acquired its charged condition either by recharging or manufacturing, the aggregate effect of the chemical reactions taking place between the anode and the cathode discharges electricity.

How do energy storage batteries work?

At their core, energy storage batteries convert electrical energy into chemical energy during the charging process and reverse the process during discharging. This cycle of storing and releasing energy is what makes these batteries indispensable for applications ranging from electric vehicles to grid energy management.

What happens when a battery is charged?

Let's go. Charge: When a battery is charged, electrical energy is stored within it through chemical reactions. This process involves transferring electrons from the positive electrode (cathode) to the negative electrode (anode), creating a potential difference or voltage across the battery terminals.

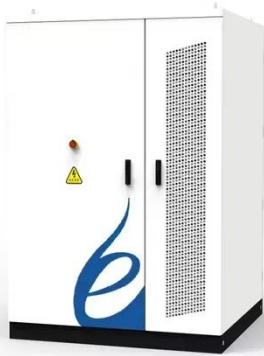

What happens when a lithium battery is discharged?

**Energy Release:** During discharging, lithium ions move back from the anode to the cathode. This movement generates an electric current that can be harnessed to power devices, vehicles, or feed electricity back into the grid.

**Voltage Drop:** As the battery discharges, the voltage decreases, and the SoC drops.
