

## SolarMax Energy Systems

# Energy storage per cubic meter of lead-acid battery

**12.8V 100Ah**

## Overview

---

Energy storage using batteries is accepted as one of the most important and efficient ways of stabilising electricity networks and there are a variety of different battery chemistries that may be used. Lead batte.

Can lead batteries be used for energy storage?

Lead batteries are very well established both for automotive and industrial applications and have been successfully applied for utility energy storage but there are a range of competing technologies including Li-ion, sodium-sulfur and flow batteries that are used for energy storage.

Is compressed air storage better than lead-acid batteries?

Researchers in the United Arab Emirates found that compressed air storage has a considerably lower Capex and a payback time of only two years compared to lead-acid batteries when considering energy stored per cubic meter, costs, and payback period. The experimental setup was at the campus of the University of Sharjah.

What is energy storage using batteries?

Energy storage using batteries is accepted as one of the most important and efficient ways of stabilising electricity networks and there are a variety of different battery chemistries that may be used.

Why is electrochemical energy storage in batteries attractive?

Electrochemical energy storage in batteries is attractive because it is compact, easy to deploy, economical and provides virtually instant response both to input from the battery and output from the network to the battery.

How much cheaper is a CAES system compared to lead-acid batteries?

The cost of the CAES system was estimated at \$23,780, compared to the \$130,307 for the 1400 kWh lead Acid battery connected to a 3.5 kW battery inverter. This makes the CAES system over 5 times cheaper.

How much energy does a battery use?

For lead-acid batteries the energy used is 30 MJ/kg or 0.6 MJ/Wh and for Li-ion batteries, 170 MJ/kg or 1.7 MJ/Wh . This is a large difference and needs to be carefully considered when looking at the overall impact of an investment on the environment.
