## Overview

---

The Department of Energy (DOE) Loan Programs Office (LPO) is working to support deployment of energy storage solutions in the United States to facilitate the transition to a clean energy economy. Is energy storage the fastest growing part of the energy sector?

Energy storage is one of the fastest-growing parts of the energy sector. The Energy Information Administration (EIA) forecasts that the capacity of utility-scale energy storage will double in 2024 to 30 GW, from 15 GW at the end of 2023, and exceed 40 GW by the end of 2025.

How many energy storage projects are there in the world?

It has 9.4GW of energy storage to its name with more than 225 energy storage projects scattered across the globe, operating in 47 markets. It also operates 24.1GW of AI-optimised renewables and storage, applied in some of the most demanding industrial applications.

What is energy storage?

Energy storage encompasses an array of technologies that enable energy produced at one time, such as during daylight or windy hours, to be stored for later use. LPO can finance commercially ready projects across storage technologies, including flywheels, mechanical technologies, electrochemical technologies, thermal storage, and chemical storage.

How many battery energy storage projects are there?

The U.S. has 575 operational battery energy storage projects 8, using lead-acid, lithium-ion, nickel-based, sodium-based, and flow batteries 10. These projects totaled 15.9 GW of rated power in 2023 8, and have round-trip efficiencies between 60-95% 24.

What is electrical energy storage (EES)?

Electrical Energy Storage (EES) refers to systems that store electricity in a

form that can be converted back into electrical energy when needed. 1  
Batteries are one of the most common forms of electrical energy storage.

Do energy storage projects need a lot of land?

Lower land use requirements: energy storage projects are typically concentrated blocks of batteries or other storage devices, which can require a fraction of the land use of other renewable resources for a comparable nameplate generating capacity.
