

## SolarMax Energy Systems

# Ess photovoltaic energy storage integrated machine

Modular design,  
unlimited combinations in parallel  
**BUILT-IN DUAL FIRE PROTECTION MODULE**

## Overview

---

What is energy storage system (ESS)?

Components What is ESS?

An Energy Storage System (ESS) is a specific type of power system that integrates a power grid connection with a Victron Inverter/Charger, GX device and battery system. It stores solar energy in your battery during the day for use later on when the sun stops shining.

What is the mpsg-D series ESS all-in-one stackable energy storage system?

The MPSG-D Series ESS all-in-one stackable energy storage system is a highly efficient, modular, and integrated energy solution that meets the needs of both residential and commercial users.

What is a must all-in-one ESS system?

The MUST All-in-one ESS system is the ideal energy storage solution for home application easily. An inverter system is inbuilt to provide a one-stop service system, which can manage your solar home battery storage system more conveniently. The perfect emergency energy solution for villas, apartments, hotels, shopping centers.

What is a fully integrated energy storage system?

This fully integrated energy storage system features a comprehensive all-in-one design, incorporating essential switches for battery fuses, photovoltaic input, utility grid, load output, and diesel generators.

How does ESS work?

ESS can be configured to optimise self-consumption or to keep batteries charged. Optimising self-consumption: When there is more PV power than is required to run loads, the excess PV energy is stored in the battery. That stored energy is then used to power the loads at times when there is a

shortage of PV power.

Should ESS be used in a BIPV system?

ESSs are required to store the excess energy and use it later during peak load demand periods. Whereas, it is difficult to justify under which circumstances ESSs can be effectively operated in BIPVs systems.
