Four lithium battery packs connected in series

Overview

Laptop batteries commonly have four 3.6V Li-ion cells in series to achieve a nominal voltage 14.4V and two in parallel to boost the capacity from 2,400mAh to 4,800mAh. Such a configuration is called 4s2p, meaning four cells in series and two in parallel.

Four lithium battery packs connected in series

Battery Packs In Series Or Parallel: Key Differences And Wiring

Connecting battery packs in series increases the output voltage while keeping the capacity the same. In contrast, wiring them in parallel boosts the total capacity without ...
