

**SolarMax Energy Systems**

# **French wind power generation system**

## Overview

---

The strong belief within in wind energy being a viable source of energy in the future and the strong political salience of the energy transition, together, explain why many in the French public support the installation of wind energy.

In 2021 reached a total of 18,676 megawatts (MW) installed capacity placing France at that time as the world's seventh largest wind power nation by installed capacity, behind the .

- In 2001 the French government initially planned to produce 21% of its electricity consumption with in 2010 to comply with.

The following offshore windfarm projects listed have been successful at the auctions. Floating turbine test sites France is operating a number of offshore test sites for prototype .

• • • • • .

Onshore Onshore wind power is projected to rise to 15,000 MW by 2018 and between a low target scenario of.

Opinion surveys Public opinion of wind power developments has remained quite popular among the French public. A 2021 Harris Interactive survey shows that 76% of the French public have a positive view of wind power. This survey.

Wind power generation in France began to develop with the construction of onshore wind farms. In 2022, the first offshore wind farm went into service. In 2022, despite relatively unfavourable weather conditions, output rose on the back of expanded capacity.
