## Overview

---

How do large battery storage systems support the energy transition in Germany?

Large battery storage systems support the energy transition in Germany, as they store electricity from renewable energy sources and make it more efficiently usable. This increases the share of green electricity in gross consumption and reduces the likelihood of having to resort to emergency power from fossil fuels during peak demand periods.

What is a battery energy storage system?

Battery Energy Storage Systems (BESS) are advanced technologies designed to store energy generated from various sources, such as solar and wind, for later use. They operate by charging during periods of surplus electricity generation and discharging during periods of high demand or low generation.

Why is battery storage important in Germany?

Half of the electricity in Germany is currently generated from renewable energies. In the next few years, this share is expected to increase BMWK to over 80%. The more electricity from renewable energies is added to the grid, the greater the need for storage options. Large battery storage systems in Germany can meet this demand.

Does Germany have energy storage?

Germany has made remarkable strides in energy storage, a critical component for balancing the intermittency of renewable energy sources like wind and solar. By the end of 2024, the country had installed approximately 19GWh of battery storage capacity, marking a 50% increase from the previous year.

How big is the battery storage market in Germany?

The Market for large battery storage systems in Germany has grown immensely in recent years. In 2023 alone, sales rose Federal Association of

Energy Storage Systems (BVES) by 46% compared to the previous year, to more than 15,7 million euros.

Why should you invest in large-scale battery storage systems in Germany?

The German market is currently very attractive for investments in large-scale battery storage systems. Therefore, we work together with our customers and partners on the successful implementation of our projects, thus creating the Basis for future-proof and sustainable value creation.
