

## SolarMax Energy Systems

# Ghana Kumasi Household Photovoltaic Energy Storage Project

## Overview

---

Is Kumasi a good place to install solar energy systems?

Kumasi and Ghana as a whole have good potential of solar radiation throughout the year. The abundance of solar energy in Kumasi makes it promising for the installation of solar energy systems. The monthly averaged solar radiation for Kumasi obtained from NASA online data base of solar radiation is given in Figure 1.

Is solar PV a viable solution for peri-urban areas in Ghana?

Hence, solar PV system is technically and economically feasible for electricity and water supply for single households in newly developing high-income peri-urban areas in Ghana and other developing countries with similar socio-economic and climatic conditions.

What is the access to electricity in Ghana?

Although the access to electricity in Ghana was over 87% for urban households and urban water coverage stood at 76% , there are disparities between the urban centres and the newly developing peri-urban areas.

How much water does a household need in Ghana?

A typical household size of 5 people and per capita water consumption of 120 L/person/day which is usually taken as the design standard for high income group in urban areas in Ghana was used to determine the waste demand of the household. Table 4 shows the water demand for the household. Table 4. Water demand for the household Table 5.
