Global solar panel supply

CE UN38.3 MSDS

Overview

What is the global solar PV supply chain worth?

In that last year, the global solar PV chain reached an industrial business value of some 104.7 billion U.S. dollars, with China dominating the market, and followed by the United States and Malaysia. Discover all statistics and data on Global solar PV supply chain now on [statista.com](https://www.statista.com)!.

How big is the solar supply glut in 2024 & 2028?

S&P Global Commodity Insights forecasts global solar additions of 399 GW in 2024, and 465 GW in 2028. This "significant supply glut" has already created an environment of low panel prices and led to a stockpiling of imported Chinese modules in Europe and the US, the IEA said.

What is the solar PV supply chain?

The solar PV supply chain is one of the most geographically concentrated supply chains globally, as China dominates raw material mining and refining and manufactures over 90% of critical inputs such as polysilicon, ingots and wafers.

Where can I find a solar supply chain map?

Our map resources include: Sinovoltaics offers dedicated supply chain maps for North America, Europe, Southeast Asia, and India. Each map highlights the region's existing and future solar module manufacturers. Our maps also break down the area's critical suppliers for cells, wafers, ingots, and polysilicon.

What is the global investment in solar PV manufacturing facilities?

Global cumulative investment in solar PV manufacturing facilities more than doubled in the past decade to almost USD 100 billion in 2021. Overall, polysilicon and ingots/wafers together account for almost 70% of all investment in solar PV manufacturing due their high capital requirements.

How has global solar PV manufacturing capacity changed over the last decade?

Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China over the last decade. China has invested over USD 50 billion in new PV supply capacity – ten times more than Europe – and created more than 300 000 manufacturing jobs across the solar PV value chain since 2011.
