Government construction of communication base station EMS

Overview

What is an in-building emergency responder Communications Enhancement System (Erces)?

An In-Building Emergency Responder Communications Enhancement System (ERCES) is a wireless communications system used by first responder and emergency services personnel, such as police, fire, emergency medical, homeland security, and disaster response agencies.

Who needs emergency responder communications coverage?

The NFPA and ICC national level model in-building code development is being driven primarily by fire service jurisdictions. However, the requirements for emergency responder communications coverage are designed to include all public safety agencies, including law enforcement and emergency medical services.

Why do emergency responders need in-building wireless communications?

The need for in-building wireless communications for Emergency Responders resulted in the development of national model codes by the National Fire Protection Association (NFPA) and the International Code Council (ICC) as early as 2009.

Are cellular communications incorporated into emergency response?

In late 2017, the Safer Buildings Coalition surveyed the International Association of Fire Chiefs (IAFC) to get a sense of how cellular communications have been incorporated into emergency response. Here are the findings:.

What frequencies do public safety agencies use?

For many years, public safety agencies utilized bands of frequencies, in the VHF and UHF parts of the spectrum. These frequencies are allocated by the Federal Communications Commission (FCC) for communication between fixed base stations and land mobile vehicle-mounted and portable transceivers.
