

SolarMax Energy Systems

Greek energy storage battery wholesale

Overview

Will Greece install 900 MW of storage by 2030?

According to the Greek National Energy and Climate Plan (NECP), the nation aims to install 4.3 GW of storage by 2030. Thus far, 900 MW has been allocated via the Greek Regulatory Authority for Energy, Waste, and Water (RAAEY) tenders. Therefore, the remaining share would be delivered under the new plan but without any subsidy support.

How much power will Greece have by 2030?

The government now aims for 2.65 GW of battery projects on the transmission grid and a further 900 MW on the distribution grid. According to the Greek National Energy and Climate Plan (NECP), the nation aims to install 4.3 GW of storage by 2030.

Should we add batteries to the energy grid?

The reasoning is to create more space in the electricity grid and maximize installed capacity, in pursuit of the goal of an 80% renewables share by 2030, from the revised National Energy and Climate Plan (NECP). Investors have expressed concern that adding batteries would increase project costs and erode returns.
