

## SolarMax Energy Systems

# Height of photovoltaic inverter from ground

## Overview

---

As per [ESV.vic.gov.au](http://ESV.vic.gov.au), the minimum height to the bottom of the inverter can't be less than 500mm from the ground, floor or platform & the maximum height to the top of the inverter is 2 meters above ground, floor, or platform. How high should an inverter be?

Yes -the maximum height to the top of the inverter is 2 metres above ground, floor or platform, the minimum height to the bottom of the inverter shall not be less than 500mm from ground, floor or platform. Do I need to provide isolation for the AC circuit at or near the inverter?

.

What is the minimum array area requirement for a solar PV inverter?

Although the RERH specification does not set a minimum array area requirement, builders should minimally specify an area of 50 square feet in order to operate the smallest grid-tied solar PV inverters on the market.

What temperature should a solar inverter be installed at?

Observe the warning messages on the inverter. To ensure optimum operation, the ambient temperature should be between -40°C (-40°F) and 65°C (-149°F). The mounting location should not be exposed to direct solar irradiation. Direct solar irradiation can cause the inverter to overheat. As a result, the inverter reduces its power output.

Where should a solar inverter be installed?

However, a shaded spot, away from direct sunlight and moisture, is always recommended for installing a solar inverter. However, there are several factors that you should consider when choosing a place for installing a solar inverter.

When should a solar inverter be installed?

As per Green Power Energy, it will be great if the water clearance level for any flooding area is above 3 feet. A solar inverter is an electric appliance that can cause a serious hazard if someone comes in contact with it. Hence, it should be installed at a safe location where it may not harm the people passing by it, including a narrow passageway.

Where should a PV inverter be mounted?

When mounting on the framework, the mounting position should preferably be in the center of the PV module. This will ensure a longer electrical endurance of the inverter. Greater distances between two inverters can be bridged using an additional cable and two AC field plugs ( > Assembling the AC Field Plug).
