Heishan Green Port Energy Storage Lithium Battery

LPSB48V400H
48V or 51.2V

Overview

Where is China's first large-scale lithium-sodium hybrid energy storage station located?

Baochi Energy Storage Station, China's first large-scale lithium-sodium hybrid energy storage station, starts operations in Southwest China's Yunnan Province on May 25, 2025. Photo: CCTV News China's first large-scale lithium-sodium hybrid energy storage station began operations on Sunday in Southwest China's Yunnan Province.

Are lithium-ion batteries a sustainable storage system?

Here, through the life cycle assessment (LCA) and life cycle cost assessment approach (LCCA), the solution integrating lithium-ion batteries as a storage system is the most sustainable, leading to a 46 % reduction in CO₂ emissions.

How does a hybrid power plant improve short-sea ship performance?

Innovative hybrid power plant design enhances short sea ship efficiency. Advanced energy management optimizes hybrid short-sea ship performance. Thorough examination of onboard electrical and thermal energy systems. Achieves 50% reduction in CO and pollutant emissions during port stays.

What is lithium-sodium hybrid technology?

The lithium-sodium hybrid technology enables more stable integration of large-scale renewables into the power grid and supports future participation in electricity market trading," Wu Bin, deputy manager of the Baochi Energy Storage Station project, was quoted by CCTV News as saying.

Is there a shortage of lithium batteries in China?

However, growing demand for lithium batteries has raised concerns over resource shortages, as 70 percent of lithium battery materials in China come from overseas, meaning a high dependence on imports, the CCTV News report

said. In contrast, the raw materials for sodium batteries can be sourced from salt mines, seawater, and salt lakes.

Are lithium-ion batteries and supercapacitors effective tools for reducing emissions?

The analysis reveals that lithium-ion batteries and supercapacitors are effective tools for reducing pollutant emissions by minimizing diesel generator usage during port stopovers, resulting in a significant reduction in fuel consumption from 1.148 kt/year to 0.511 kt/year.

Heishan Green Port Energy Storage Lithium Battery

Breakthrough 'green' energy storage debuts

By partnering with two other forms of energy storage devices (lithium batteries and sodium batteries), the new water-based metal batteries have been installed in a microgrid inside the ...

ENERGY STORAGE SYSTEM

Product Model
 HJ-ESS-215A(100KW/215KWh)
 HJ-ESS-115A(50KW/115KWh)

Dimensions
 1600*1280*2200mm
 1600*1200*2000mm

Rated Battery Capacity
 215KWH/115KWH

Battery Cooling Method
 Air Cooled/Liquid Cooled
