## Overview

---

Before we go any further, we highly recommend that you choose a pure sine wave inverter. This type of inverter delivers high-quality electricity, similar to your utility company. This way, none of your appliances run the risk of being damaged. Now, when it comes to sizing your inverter, you always need to check.

We have summarized the appliances that inverters from 300W to 3000W can run depending on their rated maximum power. Note to our readers: Use the above formula to determine.

The calculation for the required inverter size is done using the following formula:  $\text{Inverter Size (W)} = (\text{Total Wattage} \times \text{Safety Factor}) \div \text{Inverter Efficiency}$  This ensures that the inverter can handle both the load and the efficiency losses.
