# How many 5G base station costs are there in China

## Overview

---

How many 5G base stations will China build in 2025?

China plans to construct over 4.5 million 5G base stations in 2025 while introducing additional policy and financial incentives to support industries expected to shape the next decade, the country's Ministry of Industry and Information Technology (MIIT) announced during its annual work conference.

How many 5G stations are there in China?

Stock photo of a network tower. Base stations offering high-speed fifth-generation (5G) mobile networks have now exceeded 3.19 million, the Ministry of Industry and Information Technology (MIIT) in China has said. The country now hosts 22.6 5G stations for every 10,000 residents, CGTN reported.

How many 5G base stations are there in the United States?

While China leads in sheer numbers, the U.S. is making steady progress. By late 2023, the country had between 150,000 and 200,000 active 5G base stations. The deployment strategy in the U.S. is different from China's, as it relies on private investment rather than government-led initiatives. Is this article too long?

.

Can 5G reduce energy consumption in China?

With 5G base stations consuming approximately 3 times more power per base station unit, this means 5G networks could result in a nine-fold increase in electricity costs and carbon emissions. In the face of this challenge, many solutions are being trialled and introduced to reduce 5G energy consumption, and not just in China.

How much does 5G cost?

Deploying 5G is expensive. A single base station costs between \$100,000 and

\$200,000, depending on location, spectrum use, and hardware requirements. These costs include not just the equipment but also installation, maintenance, and power consumption. For telecom providers, managing these costs is a major challenge.

How many people use 5G in China?

Indeed, a report from China's Ministry of Industry and Information Technology showed that the number of 5G mobile network users is around 500 million , only half of the number of 5G plan subscribers. This is not very surprising, as 5G plans often include more data compared to similar-priced 4G plans to boost sales.
