

## SolarMax Energy Systems

# How many watts of solar panels are needed in Albania

## Overview

---

How much solar power will Albania have by 2030?

Despite currently having an installed solar capacity of around 70 MW, there are ambitious projections indicating that Albania could add up to 800 MW by 2030, driven by a recent surge in investments totaling \$286.2 million over the past decade, including a record \$192.2 million in 2023 alone.

How much solar energy does Albania have a year?

With an average solar insolation of approximately 7.63 kWh/m<sup>2</sup>/day and an annual average of 2,400 to 2,500 hours of sunshine, Albania is poised to leverage its natural resources to enhance energy independence and sustainability.

Does Albania have a solar PV potential?

Explore the solar photovoltaic (PV) potential across 6 locations in Albania, from Tirana to Vlorë. We have utilized empirical solar and meteorological data obtained from NASA's POWER API to determine solar PV potential and identify the optimal panel tilt angles for these locations.

Can Albania expand its solar power capacity?

Most solar power plants in Albania are small-scale installations, generally with capacities of less than 5 MW. This limited scale of deployment underscores the opportunity for Albania to expand its solar capacity significantly, particularly as the country relies heavily on imported fossil fuels to meet its energy needs.

What is solar investment in Albania?

Solar investment in Albania for the next 10 years refers to the country's strategic focus on expanding its solar energy capacity, driven by its advantageous geographical conditions and growing economic need for renewable energy sources.

Will solar power outpace wind development in Albania?

While Albania has considerable wind potential, particularly in areas like the Lezhe mountains along the Adriatic coast, solar energy is forecasted to outpace wind development in the coming years. BloombergNEF projects that wind energy will reach 370 megawatts of installed capacity by 2030, which is less than half of the forecasted solar growth.
