How much do you know about the safety of communication base station inverters

2MW / 5MWh
Customizable

Overview

How much exposure can a radio base station have?

On the ground, in houses, and other places where people reside, the exposure levels from radio base stations are normally below 1 percent of the limits. Only in the close vicinity of the antennas can the exposure limits sometimes be exceeded.

How do you support a base station when AC power is interrupted?

A backup battery (block 5) is one of the best ways to support the base station when AC power is interrupted. Support the base station by: Providing a fast-acting fuse on the battery circuit for overload protection. Monitoring battery temperature rise to ensure battery safety.

Which Inverter should I Choose?

If you wish to use those items with an inverter, then choose a Pure Sine Wave inverter. If you mostly want to run lights, TV, microwave oven, tools, etc, a Modified Sine Wave inverter is fine for your needs. We often are asked if computers will work with Modified Sine Wave.

Are radio base stations harmful?

The WHO states: "From all evidence accumulated so far, no adverse short- or long-term health effects have been shown to occur from the RF signals produced by base stations." (WHO fact sheet "Base stations and wireless technologies") Mobile phones and mobile devices require a network of radio base stations to function.

What should you not do with an inverter?

Keep the inverter dry. Do not expose it to rain or moisture. DO NOT operate the inverter if you, the inverter, the device being operated, or any other surfaces that may come in contact with any power source are wet. Water and many other liquids can conduct electricity which may lead to serious injury or

death.

What does a base station do?

The base station is a fixed transceiver that acts as the primary transmission and reception communication hub for wireless devices. The base station modulates baseband information and transmits it to mobile devices. Base stations also receive mobile device transmissions, modulate them, and send them to the wireline infrastructure.
