# How much does 350 watts of solar power cost

## Overview

---

How much does 350 watts of solar power cost?

The estimated cost of a 350-watt solar power system typically ranges between \$1,000 and \$2,000, depending on several factors such as location, installation complexity, brand quality, and additional equipment. How much power does a 350W solar panel produce?

A single 350W solar panel is rated to produce 350 watts of power. However, the actual power output can vary based on factors like geographic location, shading, and panel tilt.

Are 350 watt solar panels expensive?

They may be somewhat less expensive, but their quality standards are equally rigorous. These are not meant as rules, but as general guidelines. You can browse 350 watt solar panels for sale in our store. Don't hesitate to contact us if you have any questions.

How much does a solar panel cost?

Today's premium monocrystalline solar panels typically cost between 30 and 50 cents per Watt, putting the price of a single 400-watt solar panel between \$120 to \$200, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.25 per Watt. The cost of a solar panel also depends on how you buy it.

How much space does a 350 watt solar installation take?

To calculate the estimated space needed, we assumed that 350W solar panels are, on average, 16.5 square feet (5.5' by 3'). Therefore, a solar installation with 350-watt solar panels will take approximately 16.5 square feet of space.

How much does a solar system cost per watt?

As of publishing, the average cost per watt is \$2.84. Most solar companies set

the price according to the solar system's wattage. A solar installation's “cost per watt” is a little like the “price per square foot” when you buy a house. It helps compare the value of solar energy systems in different sizes.

How many 350W solar panels are needed for a 6kW system?

Installing 17 panels for a 6 kW system will produce enough electricity to offset or eliminate your electric bill. Using six 350W solar panels will produce roughly 3,000 kilowatts hours (kWh) of electricity, significantly below how much electricity a standard single-family household uses.
