How much is the price of lithium energy storage power in Southeast Asia

Overview

How much does a lithium ion battery cost?

The average price of lithium-ion battery packs is \$152/kWh, reflecting a 7% increase since 2021. Energy storage system costs for four-hour duration systems exceed \$300/kWh for the first time since 2017. Rising raw material prices, particularly for lithium and nickel, contribute to increased energy storage costs.

Will lithium-ion battery prices rise 8% from 2023 to 2028?

As a result, U.S. prices for 5-MWh lithium-ion battery systems made in China could rise by 8% from 2023 to 2028, despite a substantial expected decline in lithium carbonate prices over the same period, the London-based consultancy said in its Q4 2024 battery energy storage system price forecasting report.

Why are lithium-ion batteries so expensive in 2025?

In 2025, lithium-ion battery pack prices averaged \$152/kWh, reflecting ongoing challenges, including rising raw material costs and geopolitical tensions, particularly due to Russia's war in Ukraine. These factors have led to high prices for essential metals like lithium and nickel, impacting the production of energy storage technologies.

Should Lithium prices rise or fall in 2023?

Fortunately, the CEA report noted, lithium prices fell 69%, on average, from 2023 to 2024. The three-year outlook envisions only a slight, steady rise in lithium-ion market prices regardless of the tariff issue. Seeking sourcing diversity also can help drive basic battery cost reductions, the CEA summary noted.

Will Lithium prices rise if the US imposes a tariff?

The U.S. is also working on potential lithium mines inside the country, including projects in Nevada and Tennessee. Fortunately, the CEA report

noted, lithium prices fell 69%, on average, from 2023 to 2024. The three-year outlook envisions only a slight, steady rise in lithium-ion market prices regardless of the tariff issue.

How will China affect lithium-iron-phosphate batteries in Q4 2024?

With limited production capacity outside China, the consultancy's Q4 2024 report sees heavily tariffed Chinese production setting the market price for lithium-iron-phosphate batteries over the next two years.
