How to Profit from Solar Energy Storage

Overview

How can you increase profits in your energy storage business?

By adopting strategic approaches like investing in advanced R&D, expanding market reach, and enhancing customer experience, your venture can soar. Can you sell solar power to generate income?

Contrary to popular belief, the financial benefits of solar energy don't stem from selling excess power back to the grid but from significant savings and credits. Unfortunately, selling your solar power to generate income is not a profitable option. You can't exactly sell the electricity your solar system generates back to the utility.

Can you sell solar energy to a utility?

You can't exactly sell the electricity your solar system generates back to the utility. However, one of the biggest benefits of solar energy is its impact on your finances. Your solar energy system will save you money that you would otherwise spend on your monthly electricity bill from the utility company.

Can you make money selling solar energy certificates?

In some states, you can make money by selling SRECs or solar renewable energy certificates. SRECs are certificates solar energy owners earn for every 1,000 kilowatt-hours (or 1 megawatt-hour) produced by their system.

How do utilities pay for solar energy?

However, there are policies in place to govern how utilities compensate you for the electricity generated by your solar system. If you have a grid-tied solar system, you can send the surplus electricity back to the grid, which entitles you to a credit from the utility company, or they may purchase it from you at a nominal wholesale price.

Can a large solar developer profit from a leased property?

While it's true that some large solar developers can profit from installing a solar system on leased property and selling that electricity back to the property owner, this won't be the case for your average solar system investor.

Should a storage project be paired with a solar or wind power project?

Pairing a storage project with a solar or wind power generation project can be beneficial. It allows projects to charge the storage system rather than deliver power to the grid when market prices for electricity are low (or negative) or when electricity would otherwise be curtailed.
