How to connect remote base station energy management system to the Internet

Overview

How do urban radio stations manage power & environmental management?

For urban radio sites, some operators use a multi-layer control system for their power & environmental management. Each city has a power & environmental monitoring system which reports to a higher-level monitoring center.

How does works manager detect incoming IBSS server streams?

When Works Manager detects an incoming IBSS Server stream from a device registered in your account it will list it as an Internet Base Station Correction Stream. The Reference Station - Station Name will be suffixed with 'CMR' for CMR+ or 'RTCM3' for RTCMv3 to create the different Correction Stream (mountpoint) names.

Why are base stations important?

By Yang Ji Base stations are the key energy consumers on any mobile network; their monitoring and upgrade are essential if operators are to compete.

How many correction streams can a R750 IBSS base support?

The same R750 IBSS Base can be configured with up to 3 different correction streams (mountpoints) to support CMRx, CMR+ and RTCMv3 When Works Manager detects an incoming IBSS Server stream from a device registered in your account it will list it as an Internet Base Station Correction Stream.

How do I add a correction stream name to a reference station?

The Reference Station - Station Name will be suffixed with 'CMR' for CMR+ or 'RTCM3' for RTCMv3 to create the different Correction Stream (mountpoint) names. No suffix is added for CMRx Correction Stream The current status, connected devices and a connection report are available.

What is onsite energy conservation?

Onsite energy conservation requires coordination between the network and power equipment, as well as flexible power usage based on network load and environmental factors. Some operators are starting to reduce the number of active carriers so that they are more in line with load levels.
