# How to set up Internet access for EMS communication base station

# Overview

How do I configure a base station using an internet browser?

To configure the base station by using an Internet browser, do the following: Step 1 Open an Internet browser window. Step 2 Enter 192.168.200.1 (the base station default IP address) in the browser location field.

How do I select a EMS base station Radio?

To select a channel on an EMS base station radio, you should set the channel selector on the local primary channel as used in your area. The channel select button must be depressed in order to transmit on the selected frequency.

How do I configure a base station?

Configuring the base station as an access point. A wireless PC can use an Internet browser to initially configure the base station. Unlike the BSCU, when you configure the base station by using an Internet browser, the radio card parameters are not automatically changed to match the base station settings.

What CTCSS tone do EMS med radios use?

For this reason, all New Mexico EMSCOM UHF radios on the EMS MED channels should be using CTCSS tone 136.5. Types of Stations: A base station transmits directly to mobiles and portables. If the base station is at some distance away from the operator, it is known as a remote base station.

Can a wireless PC configure a base station using an internet browser?

A wireless PC can use an Internet browser to initially configure the base station. Unlike the BSCU, when you configure the base station by using an Internet browser, the radio card parameters are not automatically changed to match the base station settings. Before using the Internet browser, the wireless PC must be associated with the base station.

How do I use the EMScom system?

When using the EMScom system, always identify whom you are calling, give your unit number, name of service, and the repeater in use. For example: 'Mobile to base - Call up using a repeater transmission route.'.
