Huawei Lesotho PV Module Project

Overview

What is ramarothole solar power project in Lesotho?

The project will be under the direct supervision of Lesotho Electricity Generation Company (LEGCO). The 70MW Ramarothole solar power project is planned to be implemented and built in two phases: Phase I: 30MWp with construction period of 18 months and Phase II: 40MWp to be completed in 2030.

How much does Lesotho government contribute to solar power project?

Lesotho Government Contribution to this project is estimated at M220 million which will cover the costs of land compensations valued around M57 million, Tax obligations as well as operating costs of Lesotho Electricity Generation Company (LEGCO). The government is implementing 70MW solar electricity generation project at Ramarothole in Mafeteng.

Who financed 30MW solar project in Lesotho?

A Chinese based contractor SINOMA-TBEA Consortium has been engaged to construct the 30MW solar project. The project is under the direct supervision of Lesotho Electricity Generation Company (LEGCO). Phase I (30MW) of the project is financed by a soft loan from EXIM Bank of China with total contribution of USD 70.188 million.

How does Huawei's utility-scale smart PV & ESS work?

Huawei's Utility-Scale Smart PV & ESS Solutions can operate independently of traditional grids. Where traditional grids use synchronous generators, Huawei uses a grid-connected ESS with power electronics in the form of the smart PCS to manage the discharge and charge of power.

How does Huawei's smart PCs System work?

Huawei's smart PCS system is also used to send power to be stored in a smart string energy storage system where it can be stored for use when there is no

sunlight, after being processed by a distribution transformer. “In a PV plant, additional components like transformers are used to step up the voltage of the electricity.

How does Huawei's virtual synchronous machine technology work?

“ Huawei has innovated by creating virtual synchronous machine technology that enables each PCS to simulate the role of a traditional generator. This provides effective control over the grids’ frequency and voltage and ensures stable, safe and reliable power supply within our microgrid projects,” says Lusson.
