Overview

What is the potential of rooftop solar PV in Indonesia?

Expansion of Solar Rooftops for Households Another major potential is presented by the utilization of rooftop solar PV for households in Indonesia. With a potential capacity of 32.5 GW, Indonesia's rooftop solar PV, as of June 2023, produces up to 95 MW, with the household sector accounting for 72% of the share.

Will PLN change the rooftop solar PV market in Indonesia?

Since nearly all Rooftop Solar PV systems in Indonesia (particularly those involving PLN) currently operate on a net-import basis, in practice, the impact of this change on the existing market should be relatively minimal. Nonetheless, this is a new restriction on the future potential of the Rooftop Solar PV sector in Indonesia. 3. Capacity Charge.

Why are rooftop PV systems important in Indonesia?

In Indonesia, rooftop PV systems in residential areas are critical because more than 40 % of the total national energy consumption in 2021 came from the residential sector and is projected to increase dramatically in the coming decades .

What is a quota for rooftop solar PV in Indonesia?

Under the new regulatory regime, IUPTLU holders must establish a five-year quota for development of Rooftop Solar PV systems in Indonesia. The quota must take into account (i) the national energy policy, (ii) the IUPTLU holder's electricity supply business plan, and (iii) the reliability of the IUPTLU holder's electricity network.

What is Indonesia's commitment to rooftop solar?

Indonesia's commitment to rooftop solar is set to accelerate, with a target of 5,746 MW by 2028. The quota system is structured to increase capacity

gradually, providing certainty for investors and industry players. Regional clustering ensures that deployment is tailored to local needs, enhancing sustainable energy distribution.

Will Indonesia reach 3.6GW of rooftop solar capacity by 2025?

It adds that the newly issued quota is still not in line with the National Strategic Program target of reaching 3.6GW of rooftop solar capacity by 2025, which was set in 2021. According to research firm Rystad Energy, the installed rooftop solar capacity in Indonesia was only 0.192MWp as of May 2024.
