

## SolarMax Energy Systems

# Ireland s new energy photovoltaic power generation and energy storage equipment

## Overview

---

Will Ireland need more energy storage?

With a target of 80% renewable electricity from intermittent sources on our grid by 2030, Ireland will require a significant amount of energy storage in the years to come.

Who is renewables Ireland?

At Renewables Ireland, we are at the forefront of this movement, offering expert solutions for solar panel installation, smart energy upgrades, and complete micro-generation system support. Our mission is to help you power your life sustainably, affordably, and intelligently. What Is Micro-Generation and Why Does It Matter?

.

How much solar power does Ireland have?

Since the energisation of Ireland's first grid connected solar farm in 2022, the industry has seen rapid deployment of capacity across the country and there is over 1GW of solar PV generation connected to Ireland's electricity system including 500 MW of utility-scale connections and 300 MW of microgeneration. The acceleration of solar deployment.

Is the Irish solar energy industry a success story?

The Irish solar energy industry has been the great success story of Ireland's energy transition in recent years.

Does Ireland need a new energy sector?

In Ireland, the sector is in a relatively early stage and requires significant uplift to support delivery of the 2030 and 2050 electricity system targets, and to capture the potential of Ireland's renewable energy resources.

How much renewable power is there in Ireland?

Currently, as shown in Figure 7 there is ~13.4GW of generation capacity in Ireland, of which ~5.4GW is intermittent renewable. There is also ~0.5GW of short duration storage and ~0.3GW of LDES (the Overall we expect a significant Turlough Hill pumped storage site). Due to the intermittent growth in renewable capacity and

## Ireland's new energy photovoltaic power generation and energy storage

---

### The energy transition and solar power: A critical inflection point

The next phase in Ireland's push to harness the full potential of solar power to drive down carbon emissions is to ensure that the necessary changes to the regulatory ...
