Is it good to install solar photovoltaic panels at home

Overview

Are solar panels a good choice for your home?

Homes that have energy usage in excess of 500 kilowatt hours (kWH) per month are usually excellent candidates for solar panels. If the solar panel system produces excess energy, or more energy than the home uses, homeowners can sell the extra energy output to the local utility company each month.

Should you install solar panels at your home?

When you install solar panels at your home, you generate your own electricity—which means you become less reliant on your electric utility company and reduce your monthly electric bill. A solar panel system typically has a 25- to 30-year lifespan, so you can cut your electricity costs for decades by going solar.

Should you install solar panels on your roof?

Using an irradiance map can help determine how much sunlight a roof receives, and that data can be used by homeowners to discover if it's worth installing solar panels. Homes located in states with little to no rain or cloud cover—and without a lot of shade covering the roof—are prime candidates for solar panels.

Should you invest in a solar panel system?

Specifically, a solar panel system provides energy independence and often pays for itself in electric bill savings. Incentives like the federal solar tax credit also help reduce your upfront cost and increase your return on investment—though this benefit expires at the end of 2025.

Are solar panels right for You?

Solar panels are best for people who live in good solar states with solar-friendly policies, like net metering and solar incentive programs. Homes with

south-facing roofs and lots of unshaded space are also ideal for solar. Homeowners with high electricity bills are among those who can benefit the most from going solar.

Can solar panels be installed on older homes?

However, certain roofing materials used in older or historical homes—such as slate or cedar tiles—can be challenging for solar installers to work with. Some homes have skylights or rooftop additions like roof decks, which can also make installing solar panels expensive or difficult.
