# Is it good to use outdoor power supply in Nigeria

## Overview

---

Why does Nigeria have a poor power supply?

Another consumer of IBEDC, Tito Adebajo, a medical doctor, the poor power supply was worsened by the adulterated fuel situation, which led to fuel scarcity across Nigeria. He said, "It is time for the Nigerian government to think out of the box and profer a lasting solution. We have been cheated here over time.

What is erratic power supply in Nigeria?

Erratic power supply in Nigeria is a long-standing issue, not a recent development. It can be traced back to the years before independence, particularly in 1950, with the establishment of the Electricity Corporation of Nigeria (ECN). The corporation was characterized by isolated generation facilities and low power generation.

How much electricity does Lagos need?

Lagos only gets about 10 percent of its electricity needs, leaving its 20 million inhabitants to their own devices. Pius Utomi Ekpei/AFP via Getty Images  
Nigeria faces the triple challenge of providing reliable power supply, reducing greenhouse gas emissions, and keeping energy affordable to consumers.

How does electricity affect the environment in Nigeria?

Petrol and diesel generators increases pollution, with a negative impact on climate change and human health. In turn, environmental damage can result in agricultural job losses. Nigeria's electrification initiatives have favoured the expansion of centralised power systems to meet urban energy demand and decentralised power systems for rural areas.

Why is Nigeria not getting enough electricity?

The availability of electricity in Nigeria has worsened over the years. The country has been unable to meet demand because of its policies, regulations

and management of operations. Its failure to provide adequate and reliable energy is well documented, specifically its impact on the economy.

Does Nigeria have a power shortage?

Nigeria's shortage of reliable power supply is a constraint on the country's economic growth. The country needs to diversify its economy beyond oil and gas revenues, because that market is volatile. But if the energy-hungry private sector invested more in self-generation to make this possible, pollution would rise.
