

## SolarMax Energy Systems

# Israel photovoltaic power generation and energy storage policy

## Overview

---

What if solar power was deployed in Israel?

If deployed, this huge amount of solar power would require energy storage with a combined capacity of 500 GWh. Intensive storage capacity would be required to compensate for the intermittent nature of solar energy. "Peak demand in Israel usually occurs in the evening," they said.

Can Israel deploy photovoltaics?

New research has shown that Israel has the technical potential to deploy 172.5 GW of photovoltaics, of which 132.1 GW would be from conventional installations and 40 GW from agrivoltaics. If deployed, this full potential would require energy storage with a capacity of at least 500 GWh and strong development of vehicle-to-grid technologies.

Should Israel allow nuclear power plants?

The third scenario would require the state to allow the operation of nuclear power plants. According to this plan, by 2050, 64% of Israel's energy needs will be provided by photovoltaic power plants. Under this scenario, the country would have 108 GW of PV capacity and 70 GW of four-hour energy storage capacity.

When will energy storage facilities be built in Israel?

(3) The Electricity Authority will publish a tender in September 2023 for the establishment of Energy Storage facilities with a total capacity of 900MW. Israel plans to use its abundant gas resources to leverage the development of a gas-based auxiliary industrial sector.

How many PV power plants does electric Israel have?

Today BELECTRIC Israel operates (October 2020) 23 PV Power plants, 257 MWp providing our customers the extra added value from their assets. BELECTRIC Israel employs about 60 employees including engineers,

procurement specialists, project managers, construction and O&M teams.

What is Israel's Electric demand?

“Peak demand in Israel usually occurs in the evening,” they said. They also estimated the country's total electric demand for the year 2050, including electromobility, at 183.3 TWh and considered vehicle-to-grid (V2G) as a major source of storage. “In the V2G concept, the battery cost is actually embedded, or sunk,” Mittelman added.

Here's the kicker: photovoltaic (PV) plants without storage can't solve the

**Efficient  
Higher Revenue**

**Intelligent  
Simple O&M**

**Flexible  
Abundant Configuration**

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 150% Peak Output Power
- 2 MPPT Trackers, 150% DC Input Oversizing
- Max. PV Input Current 16A, Compatible with High-Power Modules
- IP66 Protection Degree: support outdoor installation
- Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection
- Plug & Play, EPS Switching Under 10ms
- Compatible with Lead-Acid and Lithium Batteries
- Max. 6 units Inverters Parallel
- AFCI Function (Optional): when an arc fault is detected the inverter immediately stops operation
