Jordan Substation Energy Storage Project

Overview

Amman, April 22 (Petra) -- Energy experts have lauded the Cabinet's recent approval of a grid-scale battery energy storage system (BESS) for the National Electric Power Company's transmission network, calling it a critical step toward enhancing Jordan's energy security and grid stability. Is battery energy storage possible in Jordan?

In response to this, Fichtner in collaboration with the Jordanian Ministry of Energy and the transmission system operator, NEPCO, has analyzed the potential for battery energy storage and, in the role of Transaction Advisor, is providing support for implementing a pilot project.

Why is Jordan funding a new high-voltage electricity substation?

These funds will finance the construction of a new high-voltage electricity substation in northern Jordan in order to improve the grid's capacity, enabling it to handle existing and new generation in the north of the country.

What does the EBRD do in Jordan?

It is the owner and operator of Jordan's transmission system, as well as the single buyer of electricity. Since the start of its operations in Jordan in 2012, the EBRD has invested almost €2.3 billion across 74 projects, providing more than €815 million to projects in the country's energy sector through 14 loans.

Jordan Substation Energy Storage Project

Pilot project for a 30/60 MWh battery storage facility, Jordan

This project involves developing a novel BOO model, which enables the grid operator to flexibly dispatch the electrical storage facility whenever the need arises.
