

## SolarMax Energy Systems

# Lithium Battery Energy Storage Project Construction Plan

## Overview

---

What is a utility scale lithium-ion battery energy storage system?

Utility Scale Lithium-ion Battery Energy Storage Systems take excess energy from renewable energies or conventional power plants to charge up the large lithium-ion batteries. Our client has specified that we will design a 25 MW, 4 hr system. The system will have a 30-year life cycle and two augmentations throughout its lifetime.

What are the disadvantages of a lithium-ion battery energy storage system?

Another disadvantage is that lithium-ion batteries degrade in capacity relatively quickly. This makes the project more expensive through overbuilding at BOL and augmentations throughout its life. Since we started working with Burns and McDonnell on the battery energy storage system, we have completed many steps of the process.

How to design a battery energy storage system?

One of the most essential parts of designing a battery energy storage system is the electrical connections between components. This concept is illustrated with a one-line diagram. The one-line diagram includes every connection, from the substation to the main power transformer, the inverters, the batteries, and the auxiliary power.

What should be included in a contract for an energy storage system?

Several points to include when building the contract of an Energy Storage System:

- Description of components with critical technical parameters: power output of the PCS, capacity of the battery etc.
- Quality standards: list the standards followed by the PCS, by the Battery pack, the battery cell directly in the contract.

What is a lithium-based battery blueprint?

This document outlines a U.S. lithium-based battery blueprint, developed by

the Federal Consortium for Advanced Batteries (FCAB), to guide investments in the domestic lithium-battery manufacturing value chain that will bring equitable clean-energy manufacturing jobs to America.

Can a battery energy storage system be implemented in Ames?

We are designing a battery energy storage system to be implemented in Ames, Iowa. This section discusses the context of implementing a BESS in any community in America. Our project addresses the increasingly important need to support a transition to renewable energy.

## Lithium Battery Energy Storage Project Construction Plan

### A road map for battery energy storage system execution

Successful BESS project execution requires a systematic approach that coordinates multiple disciplines, stakeholders and technical requirements.
