Lithium iron phosphate battery station cabinet for telecommunications

Overview

What is a lithium iron phosphate (LiFePO₄) battery?

Lithium Iron Phosphate (LiFePO₄) batteries are a type of lithium-ion battery with a lithium iron phosphate cathode and typically a graphite anode. Compared to traditional lead-acid batteries or other lithium-ion batteries (such as ternary lithium batteries), LiFePO₄ batteries offer several notable advantages:.

Why is a LiFePO₄ battery better than a lead-acid battery?

LiFePO₄ batteries charge faster and have higher capacity. They also offer good performance at high temperature. LiFePO₄ batteries have a DOD of 90% or higher. This is compared to about 50% for a lead-acid battery. In practice, this means that a LiFePO₄ battery supplies power for longer intervals between charging.

How long does a lithium ion battery last?

They offer 10 to 15 years of superior performance, at much lower cost than other lithium iron batteries. They have the 16 cell automotive grade configuration, which is far superior and longer lasting than the storage grade 15 cell batteries.

Lithium iron phosphate battery station cabinet for telecommunication

Lithium Iron Phosphate Battery: The Future of Backup

...

Our Lithium Iron Phosphate battery products provide more stable and reliable backup power solutions for telecommunications, helping telecom operators ...
