

SolarMax Energy Systems

Lithuania Urban Energy Storage Cabinet Container

Overview

What is Lithuania's electricity storage project?

The electricity storage project will guarantee security and stability of energy supply in Lithuania. It will also enable Lithuania to disconnect from the Russian controlled electricity grid and synchronize with the continental European electricity grid.

Which energy storage facilities will provide Lithuania with instantaneous electricity reserve?

The Government of the Republic of Lithuania has appointed Energy Cells as the operator of storage facilities that will provide Lithuania with an instantaneous electricity reserve. The start of the design works for the energy storage facilities system. The start of the testing works of the energy storage facilities system.

How many battery energy storage systems are there in Lithuania?

The four battery energy storage systems (BESS), 50MW/50MWh each, have been handed over by Fluence and are now providing services to Litgrid, the transmission system operator (TSO) in Lithuania. They followed a smaller, 1MW/1MWh pilot project to test the use case back in 2021.

How will Lithuania's energy storage system work?

Energy storage system will ensure the security of supply of Lithuania's energy system and the possibility to operate in an isolated mode. for Lithuania before the synchronisation with the continental European networks (CEN), will be used for the integration of energy generated from renewable energy sources after the synchronisation.

How will Lithuania achieve the instantaneous electricity reserve of Isolated mode?

The instantaneous electricity reserve of isolated mode for Lithuania will be

ensured by the electricity storage facilities system with the 200 megawatts (MW) and 200 megawatt-hours (MWh) capacity. If needed, the high-capacity reserve storage facilities will start supplying power immediately – within 1 second.

Why should Lithuania invest in batteries?

It will also enable Lithuania to disconnect from the Russian controlled electricity grid and synchronize with the continental European electricity grid. In case of accidents, batteries will provide instantaneous electricity reserve service in less than one second. In the future, batteries will help to integrate renewable energy sources.
