

SolarMax Energy Systems

Mainstream energy storage BMS solutions

Overview

What is BMS EMS & PCs in battery energy storage systems?

Understanding the Role of BMS, EMS, and PCS in Battery Energy Storage Systems (BESS) Battery Energy Storage Systems (BESS) are becoming an essential component in modern energy management, playing a key role in integrating renewable energy, stabilizing power grids, and ensuring efficient energy usage.

What is the difference between BMS & Energy Management System (EMS)?

While the BMS focuses on battery safety and performance, the Energy Management System (EMS) oversees the entire BESS, acting as the operational brain. The EMS optimizes energy flow by deciding when to charge or discharge the battery based on energy prices, grid conditions, or renewable energy availability.

What is a high voltage BMS?

The High-Voltage BMS (60 – 1250 VDC) provides cell- and stack-level control for battery stacks. One Stack Switchgear unit manages each stack and connects it to the DC bus of the energy storage system. The Battery Control Panel aggregates the battery stacks and acts as a central control hub for the PCS and other ESS controllers.

Why should you use a BMS?

Conformance to these standards greatly simplifies testing and certification of battery stacks to UL 1973, and energy storage systems to UL 9540. The BMS provides both configurable flexibility and functional safety by physically separating the functional safety profile from the user-configurable settings.

What is the stack switchgear component of a high voltage BMS?

The Stack Switchgear component of the High-Voltage BMS includes contactors and fuses that will safely intervene to disconnect the battery stack from the

DC bus if batteries exceed voltage, current, or temperature thresholds. Reports the presence of disconnected and poorly connected voltage taps and temperature sensors.

What features are included in the BMS operator interface?

LCD touchscreen provides access to the BMS Operator Interface. Cellular modem and antenna (US/Canada) enables redundant internet connectivity. Available dedicated Ethernet port for energy controller connectivity. The Multi-Stack Controller aggregates multiple stacks to operate as a single battery.

Mainstream energy storage BMS solutions

Energy storage BMS_Products_BMF

The premier professional BMS brand offering manufacturer-direct sales and an ample supply of goods. With an annual output of 10 million units, our commitment to quality is upheld by over
