

SolarMax Energy Systems

Maldives Communication Base Station Hybrid Energy Expansion Project

Overview

How is ADB transforming the Maldives energy grid?

ADB and the Government of Maldives are working together to transform the existing energy grids on the archipelago into a hybrid renewable energy system.

Is there electricity in the Maldives?

The Maldives has achieved 100% access to electricity for its entire population, including those living on outer islands. However, each island is electrified with its own diesel-powered grid system, leading to expensive and not very reliable electricity supply.

Why is the Maldives heavily reliant on diesel?

The Maldives is heavily reliant on diesel due to its 100% dependence on diesel for electricity generation. This makes it reliant on oil imports and also results in high carbon emissions per unit of electricity, which are among the highest in the region. The Maldives has the potential for significant renewable energy resources, including solar energy and some areas suitable for wind power.

Why is diesel expensive in the Maldives?

The Maldives' reliance on diesel for power requires government subsidies in excess of \$40 million a year, making diesel expensive. This 100% diesel dependence also makes the Maldives reliant on oil imports and contributes to high carbon emissions per unit of electricity in the region.
