

SolarMax Energy Systems

Mauritania s new outdoor power supply

Overview

How is Mauritania affecting the energy supply?

Currently, the population growth is around 2,6% per year. All these transformations in Mauritania are affecting the energy consumption necessitating an evolution in the energy supply. Mauritania is mostly dependent on non-renewable resources (fossil fuels) and the access rate to the grid is pretty low.

How does Mauritania get its electricity?

The last 24% is insured by the electricity importation coming from Manantaly hydro power plant based in Mali. In 2011, electricity production stood at 136 megawatts (MW) in Mauritania and was 100% from thermo power. Mauritania aims to increase and diversify its energy sources.

Can Mauritania produce solar and wind energy?

Estimates for solar energy and wind energy production in Mauritania vary, but all recent studies agree that Mauritania has enormous potential for both solar and wind energy because of its unique geography.

Does Mauritania have a hydropower potential?

There isn't much of a hydropower potential in Mauritania. Nevertheless, the country imports hydropower electricity from Manantali hydropower plant. This source can provide 30 MW to Mauritania, mostly for the cities of Boghé and Kaédi. Mauritania aims to increase the share of hydropower electricity to 30% by 2015.

Is Mauritania ready for the largest green hydrogen production project in the world?

Driven by this momentum, the country has signed a memorandum of understanding for the implementation of the largest green hydrogen production project in the world, which Mauritania intends to develop in

partnership with CWP Global, an Australian renewable energy development company led by an American founder and CEO.

What is Mauritania's strategic plan?

Mauritania, as outlined in Mauritania's ambitious three-step strategic plan for the future development of its petroleum, mines, and energy resources from 2022 to 2030.
