

## SolarMax Energy Systems

# Medium 12v step-up inverter to 1500v

## Overview

---

What is a step-up converter (inverter)?

Undervoltage can lead to malfunctions. The step-up converter (inverter) was developed specifically for this purpose, which keeps the load voltage constant from 1.75 V/cell (1.0 V for NiCd) to 2.25 V/cell (1.42 V for NiCd). This is designed for DC 24V / 48V / 60V / 110V and 220V or for specific customer requirements.

Is 1500V a suitable voltage for solar inverters?

1500V is becoming the mainstream for solar inverters (central and string). However, careful consideration is required for the creepage and clearance of the power modules and the DC link assembly when operating at this new voltage. The solar inverter industry now requires these systems to operate at near-zero power factor.

What is the difference between a 1000v and 1500V inverter?

When selecting modules, it's important to consider the system voltage. Increasing the system voltage from 1000V to 1500V increases the output voltage of the inverter. However, extracting full power or Maximum Power Point (MPP) voltage may vary from system to system and mission profile. The open circuit voltage is 1500V.

What is a 1500V PV system?

It simply defines that the withstand voltages of cables, converters, inverters and other components used in PV systems. PV system voltages are increasing from 1000V to 1500V. The main advantages of 1500V systems is less costs saving and higher efficiency over 1000V system.

What are the benefits of a 1500vdc power converter?

CE/CSA approval The PV series with 1500VDC input voltage pass EN62109 standards, which greatly improve the reliability of the converter itself and the

system. Built-in input under-voltage protection ensuring system stability A PV system converts the sun's radiation into usable electricity and also powers itself.

Can a 1000v inverter reduce the cost of a PV system?

Studies have shown that increasing the inverter voltage from 1000V to 1500V offers opportunities to reduce the initial PV array cost by reducing the number of low voltage components and the total cabling needed. This system also has the potential to be more efficient at the grid or the DC side.

## Medium 12v step-up inverter to 1500v

---

### 150-1500VDC Input Voltage DC-DC Converter PV Series ...

1500W 30A Step Up Converter., Power for the boost converter can come from any suitable DC source, such as batteries, solar panels, rectifiers, and DC ...
