Micro base station communication principle

Overview

What is a micro base station?

A micro base station is a relatively small-scale base station with a smaller coverage area than a macro base station. It is usually set up in densely populated areas such as indoors, office buildings, shopping malls, subway stations, etc. to provide better signal coverage and capacity support.

What is the difference between a macro base station and a micro base station?

A macro base station has a large coverage distance, generally 35 km, and is suitable for suburban areas with dispersed traffic. It has omnidirectional coverage and high power. A micro base station is mostly used in cities with a small coverage distance, generally 1-2 km, and directional coverage.

Why are base stations important in cellular communication?

Base stations are important in the cellular communication as it facilitate seamless communication between mobile devices and the network communication. The demand for efficient data transmission are increased as we are advancing towards new technologies such as 5G and other data intensive applications.

What is a mobile communication base station?

Mobile communication base station is a form of radio station, which refers to a radio transceiver station that transmits information between mobile phone terminals through a mobile communication exchange center in a certain radio coverage area.

What is the difference between a micro base station and a picocell?

Micro base stations can enhance the quality and stability of wireless signals and provide higher data transmission speeds and lower latency. A picocell is a smaller base station with a smaller coverage area than a microcell.

Why is construction of mobile communication base stations important?

The construction of mobile communication base stations is an important part of the investment of mobile communication operators, and is generally carried out around factors such as coverage, call quality, investment benefits, construction difficulty, and maintenance convenience.
