

## SolarMax Energy Systems

# Mobile base station installation three-phase power supply

## Overview

---

What are the primary sources of power for a mobile base-station?

The primary sources of power for these mobile base-station vary by region and can generally be categorized into 3 buckets: Reliable grid power: AC mains or grid power can reliably serve as the primary power supply.

How much power does a base station use?

ting the generator set and power system configuration for the cell tower. At the same time, there are certain loads that every base transceiver station (BTS) will use. These loads are pictured in Figure 2, which shows a typical one-line electrical layout for a base station employing a 12 kW (15 kVA).

What is the main source of power for a base station?

In the case of base stations situated in regions with bad-grid or off-grid power availability, the predominant source of power for the base stations is diesel generators. [4,6] Diesel generation is costly in both the procurement of fuel and travel required to maintain adequate fuel levels at the base stations.

How to connect an EV base to a charging station?

Route the two power supply cables together with the Ethernet cable to the position where the charging station will be installed. Make sure there is at least 60 cm (2 ft) power supply and Ethernet cable length available at the location of the EV Base, to be able to connect it easily.

What is a typical electrical layout for a telecom base station?

Figure 2 - Typical electrical layout for loads on a telecom base station. As you can see, the load consists mainly of microwave radio equipment and other housekeeping loads such as lighting and air conditioning units. The actual BTS load used on the cell to.

How much energy does a cellular base-station consume?

Less well known is that about 0.5% of the global energy supply is consumed by mobile communications infrastructure, alone, [6,7] Among the mobile communications infrastructure, cellular base-stations have the largest appetite, consuming around 80% of total power, in studies completed of 2G and 3G networks, and of 3G and 4G networks. [6,8]

## Mobile base station installation three-phase power supply

- Efficient Higher Revenue**
  - Max. Efficiency 97.5%
  - Max. PV Input Voltage 600V
  - 150% Peak Output Power
  - 2 MPPT Trackers, 150% DC Input Overvoltage
  - Max. PV Input Current 15A, Compatible with High Power Modules
- Intelligent Simple O&M**
  - IP66 Protection Degree: support outdoor installation
  - Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
  - DC & AC Type I SPD: prevent lightning damage
  - Battery Reverse Connection Protection
- Flexible Abundant Configuration**
  - Plug & Play, EPC Switching Under 10ms
  - Compatible with Lead-acid and Lithium Batteries
  - Max. 6 Units Inverters Parallel
  - AFCD Function (Optional): when an arc fault is detected the inverter immediately stops operation
