

SolarMax Energy Systems

Mongolia customized mobile energy storage power supply

Overview

Does Mongolia need a Bess to achieve its decarbonization target?

Mongolia's heavily coal-dependent energy sector needs a BESS to achieve its decarbonization target. Coal-dependent energy system. As of end 2021, Mongolia had 1,549 megawatts (MW) of installed power generation capacity.

Could Mongolia's Bess project earn financial revenues?

Mongolia's BESS project could consider earning financial revenues, as is done in Australia. However, this is not currently feasible, as Mongolia does not offer similar market conditions and mechanisms. Its energy sector uses a single-buyer model in which the NDC is the single of-taker.

How to dispose of used Li-ion batteries in Mongolia?

But the preferred option for used Li-ion batteries is recycling or disposal. In Mongolia, Li-ion batteries are classified as hazardous. As appropriate recycling facilities are not available in many developing countries, battery suppliers tend to be responsible for the recycling or disposal of battery cells.

What are Mongolia's Bess project plans?

As one of the measures to accomplish this, Mongolia's BESS project plans include the development of an ancillary-service pricing policy and guidelines. The policy and guidelines will not only help the BESS to become financially viable, but it will also remove barriers against private sector investment in future BESS projects.

Can Mongolia adopt a financial revenue model like Australia?

Combined with the establishment of energy and Frequency Control Ancillary Services (FCAS) markets, the policy and guidelines would enable Mongolia to adopt financial revenue models like those used in Australia.

Mongolia customized mobile energy storage power supply

Unlocking Mongolia's Rich Renewable Energy Potential

A planned battery energy storage system for Mongolia will be the largest of its type in the world and provide a blueprint for other developing ...
