

SolarMax Energy Systems

Namibia Energy Storage Power Station Wholesale Factory Direct Sales

Overview

Who can develop small power generation facilities in Namibia?

Parties interested in developing small power generation facilities may also look to some of Namibia's Regional Energy Distributors (REDs). Some REDs are looking to develop their own – albeit limited – generation capacity. Partnering with a RED familiar with the ECB's IPP framework might result in faster project implementation.

Does Namibia have a solar power plant?

The government, the ECB, and NamPower have all expressed interest in grid-connected solar and wind renewable solutions, and in May 2015, Namibia inaugurated its first-ever solar power plant – a 4.5 MW plant – which represents one percent of the country's current production of energy.

Does Namibia have a centralized power system?

Namibia is evolving from a centralized model dominated by one large utility, NamPower, to a hybrid decentralized model with multiple actors generating and supplying electricity. This represents a significant shift in the generating mix.

Does Namibia accept unsolicited power generation projects?

The Electricity Control Board (ECB), Namibia's electricity regulator, accepts unsolicited power generation projects through its IPP framework. The Minister of Mines and Energy has final authority to approve/refuse IPP licenses, but the ECB makes recommendations on license applications, which the Minister has historically followed.

Can Namibia become a net exporter of energy?

Over the long-term, the government and NamPower have committed to making Namibia energy self-sufficient (and eventually a net exporter of power) by building new domestic generation capacity. NamPower has made

some progress in efforts to increase its generation capacity.

Is NamPower planning a new power station?

NamPower is considering proposals for several other new power stations and has awarded two renewable energy contracts (20MW solar, and 50 MW wind) which are under construction.
