### Nepal Smart Photovoltaic Inverter Project

#### **Overview**

How to promote solar PV in Nepal?

Solar PV comes into account in two major ways one, as cheap, green, and sustainable energy technology and another as diversifying the energy production in the country. The first and most reasonable approach for promoting solar in Nepal is to increase the domestic energy generation.

Is solar power a viable alternative source of energy in Nepal?

As an alternative source of energy, solar power is gaining popularity across the global as well as in Nepal. Although the major investments for electricity production has flowed towards hydropower projects in Nepal, investors in solar projects have increased in recent years.

Is solar PV a solution to energy insecurity in Nepal?

Hence depending nation's majority of electrical sources on a single source is dangerous and can cause catastrophic energy blackout. Solar PV a globally recognized and in trend in later decades is a promising technology which could secure the energy insecurity of Nepal.

How many solar projects are being built in Nepal?

According to Department of Electricity Development, about 17 solar projects are currently being constructed in Nepal. NEA along with private sector investors are developing these projects. The department has already issued the license for the construction and the work of these projects is going on full swing.

How many MW of electricity will Nepal produce in 10 years?

The government of Nepal has set the target of producing 15,000 MW of electricity in the next ten years. Understanding the concept of 'energy mix', the government has emphasized that the contribution of solar or renewable energy should be around 10-15 percent. Previously, the solar power was used

only for the household purposes.

Will Nepal achieve net-zero emissions by 2045?

The Government of Nepal (GoN) pledged at COP26 to attain net- zero emissions by 2045, but the goal now appears much more ambitious given the recent increase in the share of renewable energy sources. Hydropower is used to generate the majority of the nation's electricity, and the majority of these sources are Run of River (RoR) types.
