

## SolarMax Energy Systems

# New Energy Battery Cabinet Management Module

## Overview

---

What is a battery management system (BMU)?

Each battery module is equipped with a battery management system (BMU) to form a rack-mountable module assembly. Multiple module assemblies are then connected in series to form a battery rack. Each battery rack contains a rack-level BMS.

What is included in a battery management system?

In addition to battery cells, there are switch-disconnectors, contactors, sensors, sampling lines, battery management systems, as well as control units being integrated into the same battery rack. BESS employs a sophisticated, multilevel battery management system (BMS) for system monitoring and control. Each battery management system including:

What is a battery management system (BMS)?

BESS employs a sophisticated, multilevel battery management system (BMS) for system monitoring and control. Each battery management system including: At the lower level is the Module BMS (BMU), which is designed to detect voltage, temperature, and execute cell balance functions for cells.

How many temperature detectors does a battery module have?

Each battery module has 8 temperature detectors. There are 2 racks that fit in a single battery cabinet, 9 slots in each battery rack to accommodate 8 battery modules and total 1 BSPU (Battery Switch & Protective Unit). Racks are connected in parallel and paired with a system BMS to meet the power and energy requirements of the application at hand.

What is a battery module made of?

The external casing is made of metal covered by insulating materials. For example, the top cover is made of PP, the bottom base is made of aluminum. The copper bars and screws are connected internally to prevent short circuit

to ensure the electrical safety of the battery module. Each battery module has 8 temperature detectors.

What is a battery connection panel (BCP)?

Battery Connection Panel (BCP) is a piece of crucial equipment in our BESS design. It serves several functions in the system: Battery Combiner: The main function of the BCP is to combine multiple racks of batteries to one DC bus, then connect to the DC input of PCS with necessary protections.

## New Energy Battery Cabinet Management Module

---

### BYD Energy

Standard outdoor battery cabinet, MC Cube-T uses the new-generation LFP battery for energy storage, and adopts the world's first CTS (Cell To System) integration technology, small ...
