New Energy Photovoltaic Site

Overview

SEIA makes major solar project data available to the public through the map below. SEIA members have exclusive access to the list as a sortable, searchable MS Excel file that is.

SEIA does not guarantee that every identified project will be built. Like any other industry, market conditions may impact project economics and timelines. SEIA will remove a project if it is publicly announced that it has been canceled. SEIA actively.

What is Pacific Gas & Electric's Solar Project?

The project is a solar facility with a 500 MW capacity and a Battery Energy Storage System (BESS) capable of storing approximately 2,000 MWh of energy. It will also include a 230-kV generation-tie transmission line extending the project's on-site substation to Pacific Gas and Electric's proposed on-site switching station.

What is the construction and installation phase of a solar project?

With permits and financing secured, the construction and installation phase of a solar project can commence. This phase is where the physical solar panels and equipment are installed on-site and connected to the power grid. It includes several key steps that require careful planning and execution.

What percentage of new electricity generating capacity is solar?

Solar accounted for 54% of all new electricity-generating capacity added to the U.S. grid in the first quarter of 2023. Figure: New U.S. electricity-generating capacity additions, 2010 – Q1 2023. Source: SEIA.

Do working PV panels have a strong encapsulant?

No, working PV panels have a strong encapsulant that prevents leaching. Cadmium telluride (CdTe) photovoltaic (PV) cells are sealed between two sheets of glass to protect the semiconductor materials from the outside environment; and silicon modules are typically sealed with a front sheet of glass with a polymer encapsulant and backsheet.
