

## SolarMax Energy Systems

# New energy battery cabinet does not display voltage

## Overview

---

What if the display does not power up?

**Power issues** The display is powered via the VE.Direct cable or via the power cable. If the display does not power up check these cables. Make sure the VE.Direct connectors are inserted all the way into the VE.Direct ports. Check the VE.Direct port pins; ensure that they are not damaged, bent or missing.

What should I do if my battery is not charging?

If this is the case change the following settings: Increase the " charged voltage " to slightly below the absorption charge voltage. For example: 14.2V in case of 14.4V absorption voltage (for a 12V battery). Increase the " charged detection time " and/or decrease the "tail current" to prevent an early reset due to passing clouds.

Why is my v-sense battery not working?

Check if the V-sense connector is properly connected to the battery terminals. Most likely cause: the remote V-sense connector is connected in reverse polarity to the BAT+ or BAT- terminals. 6.1.5. Error 8 - Remote battery voltage sense failure (connection lost) Check if the V-sense connector is properly connected to the battery terminals. 6.1.6.

What should I do if my victron display won't power up?

Should this fail to resolve the issue, contact the point of purchase for technical support. If the point of purchase is unknown, refer to the Victron Energy Support webpage. 5.1. **Power issues** The display is powered via the VE.Direct cable or via the power cable. If the display does not power up check these cables.

What happens if the battery is not fully charged?

If the battery is not fully charged or if the automatic synchronisation does not happen, the state of charge value will start to drift and will eventually not

represent the actual state of charge of the battery. The following parameter (s) will have an effect on automatic synchronisation if they have been set incorrectly:.

Why does my Skylla I have a battery-absorption-voltage error?

**AC Chargers** This protection is default enabled on the Skylla-i and the Skylla IP44. This error is generated when the battery-absorption-voltage is not reached after 10 hours of charging. The feature of this safety protection is to detect a shorted cell; and stop charging.
