# **Nigeria base station communication tower**

## Overview

---

How do base stations work in Nigeria?

The basestations handle transmission and reception of signals; sending and reception of signals to or from higher network entities. In Nigeria, base stations are procured by several service providers wherein masts are erected by these service providers, through the tower companies in order to ensure continuous availability of reception to users.

What is a SASE station in Nigeria?

In Nigeria, base stations are procured by several service providers wherein masts are erected by these service providers, through the tower companies in order to ensure continuous availability of reception to users. Hence, the sase stations which house the masts are the lifeline to information and communication technology.

What are the threats to telecommunications in Nigeria?

One of the threats to telecommunications is the various attempts made by state governments in Nigeria to enact or enforce certain laws or impose fines that affect telecommunications services, operations and base stations – items within the exclusive regulation of the Nigerian Communication Commission.
