

## SolarMax Energy Systems

# Nordic Liquid Flow Energy Storage Project

## Overview

---

As Europe's first urban hydropower storage facility integrated with smart grid technology, this \$180 million marvel is rewriting the rules of renewable energy storage [1] [8]. Let's unpack why engineers call it "Norway's liquid battery" and how it might solve the midnight sun paradox. Why do we need hydro reservoirs in the Nordic region?

The Nordic region benefits from large hydro reservoirs that provide excellent and cost-effective energy storage options, which are already being efficiently utilised. Meeting growing future flexibility needs with a changing energy mix will require supplementing hydro reservoirs with batteries or hydrogen-based fuels.

What is the largest energy storage park in the Nordic region?

Romina Pourmokhtari, Sweden's Minister for Climate and Environment, officially inaugurated the largest energy storage park in the Nordic region. The initiative, led by Ingrid Capacity in collaboration with BW ESS, consists of 14 large-scale energy storage systems with a total capacity of 211 MW/211 MWh.

Is Energi the most forward-looking Renewables Group in the Nordic region?

This acquisition reinforces Å Energi's ambition to be the most forward-looking renewables group in the Nordic region. Å Energi is Norway's biggest renewable energy group, with operations throughout the value chain from electricity generation to end users.

Why do we need batteries in the Nordic energy system?

The storage systems can store electricity when generation is high and prices are low, and then release it again when demand is high, stabilising prices and enabling renewable energy to be used more efficiently. In addition, batteries will play a critical role in ensuring supply security in the Nordic energy system.

Is Finland a good country for energy storage?

“We are very happy that our third energy storage project in Finland is with first class partner Å Energi. Finland is an excellent country for renewable energy and energy storage, with a stable regulatory framework and a positive and forward thinking grid operator in Fingrid.” stated Hannu Koivusalo, Chairman and Managing Partner of AMP Tank.

What projects are under development in Norway?

Another project under development in Norway is a new power plant at Torolmen, in the Årdal municipality, with an estimated annual production of around 30 GWh. The total investment for this project could reach NOK290 million (US\$27.4 million), with potential construction starting as early as 2027.

## Nordic Liquid Flow Energy Storage Project

---

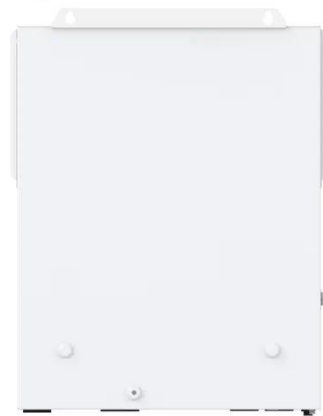

### What is Liquid Flow Energy Storage? , NenPower

Liquid flow energy storage offers a myriad of benefits, presenting itself as a potent solution to several contemporary energy challenges. The ...
